

# CDM-P11 CURRENCY DETECTOR

The latest professional counterfeit detector has now been specifically adapted for single currencies including USD, EURO and Pound Sterling (other currencies available upon request).

The CDM-P11 Advanced Single Currency Detector uses the latest specific methods including Ultra Violet (UV), Magnetic Thread (MT), Infra-red (IR) and 3D Pattern Recognition (PR) to identify counterfeit currency. With this combination of the newest technology we can guarantee the highest level of accuracy with approval from the European Central Bank (ECB).

The detector is small, lightweight and easy to use so is very convenient for any commercial premises of any kind with its automatic feeding system and clear LED display.

The detector will also display a report of the denominations and quantities of notes passed through the device as well as the reason why a note maybe suspect.

Powered by mains electricity but also with built-in battery back up, the CDM-P11 will guarantee the most sophisticated long term protection against counterfeit currency.

## SPECIFICATIONS

**Speed:** Less than 1 second per note.

**Display:** LED Display.

**Power Source:** AC 100V - 240V, 50/60 HZ.

**Unit Weight:** 0.4 Kg without adapter.

**Unit Dimensions:** 128 mm (W) x 138 mm (D) x 72 mm (H).

**Packaging Size:** 232 mm (W) x 175 mm (D) x 112 mm (H).

**Unit per Carton:** 12 units.
